Sustainable. Reliable. Affordable.

A Message from Our CEO, Rob Baron

2025 reminded us how quickly our industry can change. Tariffs, shifting supply chains, and distributor consolidation have reshaped the landscape. Through it all, Marcal has remained steady, committed to converting our paper products here in the United States and continuing our legacy of using 100% recycled fiber for most of our paper products. This foundation not only ensures reliability but also reflects our long-standing responsibility to the environment and to the communities we serve.

As we look to 2026, our focus is on what matters most, helping our partners succeed. Whether through the flexibility to serve all distribution models and end-user needs, or through the innovation of our proprietary Transcend® line, we are here to deliver solutions that drive efficiency, protect margins, and create lasting value.

At Marcal, we believe the future belongs to companies that can adapt while staying true to their values. For us, that means delivering quality products, trusted partnerships, and a commitment to sustainability you can count on. Together, we are ready to take on what's next.

Sincerely,
Rob Baron
CEO, Marcal Paper

Environmental Leadership

Marcal has been committed to environmental sustainability since the 1950s, well ahead of the curve. We understand the critical importance of preserving our planet for both current and future generations. Our mission is to create high-quality paper products while reducing our ecological footprint to promote a healthier planet.

Eco-Friendly Products

We proudly provide a wide range of eco-friendly paper solutions, including recycled towels and tissues. Made from recycled materials, these products minimize the demand for virgin resources and reduce waste, supporting a sustainable future.

Reduced Carbon Footprint

Our manufacturing processes are optimized for energy efficiency, and we continually strive to lower our greenhouse gas emissions through advanced technology.

Waste Reduction

At every level of operation, we are focused on waste reduction. From production to distribution and packaging, we are working toward a zero-waste goal, ensuring that we minimize waste wherever possible.

What To Look For

When you spot the Green Seal® graphic on your products or cartons, you can be confident you're making a smart, eco-conscious choice.

GREEN SEAL CERTIFIED
greenseal.org

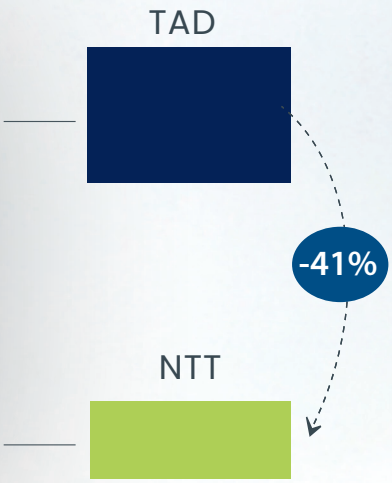

With 35 years of leadership, Green Seal is among the world's most trusted ecolabels. All products with the Green Seal mark meet a high standard for protecting people and planet.

Structured Sheet Technology

Our innovative Structured Sheet Technology reduces greenhouse gas emissions by 41% compared to traditional Through Air Dried (TAD) paper products, making a significant impact in reducing our environmental footprint.

Technology for a Greener Future.

	Papermaking Process	Emissions Efficiency
TAD	The TAD process uses a textured fabric and a Through Air Drying method to produce a paper product.	Requires more energy for drying than other papermaking processes. Which may contribute to higher GHG emissions/ energy use.
NTT	The NTT process uses a textured belt and a shoe press to create a higher density web, removing water from the sheet.	Typically NTT produces lower air/GHG emissions because it uses less energy compared to traditional papermaking processes.

*Compared to Through-Air Drying (TAD) technology through independent audit.
For details please see www.marcalpaper.com/sustainability.
